

# DBC Microcement

## Treatment and maintenance

### **Surface:**

*Dbc Microcement is a PU-free surface with authentic concrete appearance. The surface is treated with Dbc-sealer and maintained with Proluox.*

*Dbc Microcement is produced in Sweden by Design by cement.*

### **Maintenance:**

*Proluox is a cleaning wax that functions as both a cleaning agent and stain protection also wear resistance. Proluox is the recommended maintenance and surface treatment product by Design by cement to ensure that warranties for the installed floor surface are valid.*

*Before vehicles and heavy furniture are placed on the surface, the floor should be waxed with Proluox.*

*This should be repeated on the floor surface when moving vehicles.*

**For waxing:** *Mix 4 parts Proluox with 10 parts water.*

- Pour a small amount of the mixture on the floor and spread it with a microfiber mop, creating irregular patterns without forming pools.*
- Application with a scrubbing machine - Red pad.*

**Daily cleaning:** *20 ml of Proluox per 10 liters of water.*

- Pour a small amount of the mixture on the floor and wipe it in irregular patterns with a microfiber mop.*

*To ensure that the warranty for the installed floor surface is valid, these instructions should be followed.*
